

# **ABSTRACT OF THE DISCLOSURE:**

~~The present disclosure is an~~ An extension bar having at ~~a first one~~  
~~end a generally L-shaped form of a handle, and at the opposite end of the~~  
~~extension bar a headblock is~~ is formed therefor receiving a wrench head, and  
~~preventing the wrench from moving therethrough when needed, and a head~~  
portion with notches is formed thereon for receiving one of both indented  
openings formed ~~therethrough~~ thereupon top surface of an adapter being  
configured therefor receiving a straight wrench, and which is capable of  
rotating to allow the wrench to loosen or tighten nuts or bolts head in  
locations where are difficult to reach with the wrench.

~~A second end of the extension bar is formed so that the user is able to~~  
~~handle the extension bar.~~
